Art Unit: 1723

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hatch (U.S. Patent No. 5,667,675) in view of that which is conceded to be old in the prior art on pages 1-4 of the instant specification. At best, the claims differ from Hatch (U.S. Patent No. 5,667,675) in reciting performing maintenance. That which is conceded to be old in the prior art on pages 1-4 of the instant specification on pages 2 and 3 concedes maintenance is typically performed on a chromatography column and that maintenance includes screen replacement and distributor work. It would have been obvious to perform maintenance on Hatch (U.S. Patent No. 5,667,675) because that which is conceded to be old in the prior art on pages 1-4 of the instant specification on pages 2 and 3 concedes maintenance is typically performed on a chromatography column and that maintenance includes screen replacement and distributor work.

The remarks urge that the restriction requirement is improper because the method could be used on a chemical reactor. However, the instant method claims are drawn to a method of accessing the interior of a chromatography column. As such, the claims would not read on a method of working on a chemical reactor. Accordingly, the restriction has been reconsidered,
